Question Responses.pdf;

Hi all,

Thank you for your very detailed questions! FlyDreamAir is excited to work with you to improve the experience for our passengers in our lounges.

I have attached a list of responses to your questions to this email. As some of the questions asked by Anas and Adam are quite similar, you may find similarities in my responses. I've done my best to provide your group with as much information as possible, and I hope this provides you with detailed insight into our current operations and expectations.

Please let me know if you require anything else. Looking forward to updates on the development of this project and your final prototype!

Subject: Re: Formal Technical Specifications & Requirement Clarificaiton - Group T18

Hi Chris,

Following on from Anas's list, I wanted to provide the formal technical context for these questions from a systems architecture perspective.

As I am currently designing the database and backend logic, I've categorised these 'unknowns' to ensure we can map your feedback directly into our Requirement Traceability Matrix. This will help us avoid scope creep and keep us on track.

Infrastructure & Governance

1. Please confirm if the server environment requires PHP/MySQL or ASP.NET/MSSQL stack.
    a. Also, are there any specific versions for compatibility?
2. Since we're handling international passenger data, would I need to account for General Data Protection Regulation (GDPR) or Australian Privacy Act encryption for personally identifiable information in the database?
3. Are there any current rules around data retention? How long should historical booking data and logs be stored for auditing?

System Logic

1. Will the system require a unified login, or separate portals for staff (Admin) and passengers (Users)
2. Will the system need a live API hook into the flight scheduling system to verify a passenger's status at the door, to verify a passenger's -day of travel- status before allowing entry?
3. Is real-time occupancy synchronization required? Specifically, is a passenger considered to have "left" the lounge automatically once their flight departs, or is a manual checkout required?

Business Rules

1. Do customer memberships have tiers? Like Gold, Platinum, Business Class etc
    a. If so, do high-tier members get special treatment, for example; Business class gets guaranteed entry even if the lounge is at 100% capacity?
2. What are the rules around 'pay-per-use'? Should the pricing be fixed or fluctuate seasonally or based on capacity?
3. Is there a minimum or maximum stay period that should be factored in?
    a. If so, would there be a 4 hour cap on stays or
    b. Should there be specific lead times for bookings, like can book up to 2 hours before entry?

Scalability & Design

1. Is the initial phase limited to a pilot at only Australian airports, or should it support a global multi-tenant roll out from day 1?
2. Does FlyDreamAir have an established style guide that our UI/UX designer should follow to ensure brand consistency?
    a. Is there a specific brand tone? (e.g., Should the system messages be formal 'Welcome, Platinum Member' or more modern/casual?)

Technical Risks

1. Are there any specific legacy systems we need to be aware of, or will this be a completely fresh implementation?

I'm looking forward to your feedback on these points, as they'll help me lock in the database schema and system logic before we get too deep into the build.

Thanks for your time and guidance on this.

Regards,

Adam Masters

Subject: Project Questions for Client Review

Dear Mr. Chris,

I am writing on behalf of my group regarding the project assignment. As you are the client for this project, we have put together a list of questions that we would like to clarify before proceeding further.

The questions have been compiled in the attached PDF below for your reference.

We would appreciate it if you could review them and provide any clarification when convenient, as this will help us better understand the project requirements and expectations.

Thank you for your time and support.

Sincerely,
Anas Bin Muhammad Shafiq Sarawanan
